

Project Design Phase
Proposed Solution Template

Date	11 May 2026
Team ID	HDI Predictor Team
Project Name	HDI Predictor using Machine Learning and Flask
Maximum Marks	2 Marks

Proposed Solution Template:

The HDI Predictor is a Flask-based web application backed by a Linear Regression model trained on cleaned country development indicators.

S.No.	Parameter	Description
1. 1	Problem Statement (Problem to be solved)	Estimate HDI from measurable country indicators and present the result in a browser interface.
2. 2	Idea / Solution description	Build a machine learning pipeline with data cleaning, model training, a saved model file, and a Flask frontend.
3. 3	Novelty / Uniqueness	Combine country auto-fill, single prediction, batch CSV prediction, and visual explanation of the output.
4. 4	Social Impact / Customer Satisfaction	Provide a quick and understandable way to explore development estimates.
5. 5	Business Model (Revenue Model)	Academic project and reusable analytical tool for demonstration.
6. 6	Scalability of the Solution	Can be extended with more features, datasets, and models in future versions.
