

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	31 June 2026
Team ID	
Project Name	HDI Predictor using Machine Learning and Flask
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

The HDI Predictor brainstorming stage focused on shaping a browser-based system that estimates Human Development Index from measurable country indicators.

The team prioritized ideas that support a clear flow from raw dataset to prediction output through a Flask application.

Reference: HDI Predictor project context from the SmartBridge handouts.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team reviewed the HDI prediction objective, discussed the available country indicators, and agreed to frame the work as a regression problem that can be solved with a simple browser interface.

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

🕒 10 minutes to prepare
🕒 1 hour to collaborate
👤 2-8 people recommended

➔

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 10 minutes

A Team gathering
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

B Set the goal
Think about the problem you'll be focusing on solving in the brainstorming session.

C Learn how to use the facilitation tools
Use the Facilitation Superpowers to run a happy and productive session.

1

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

🕒 5 minutes

PROBLEM

How might we [your problem statement]?

Key rules of brainstorming

To run an smooth and productive session

- Stay in topic.
- Defer judgment.
- Go for volume.
- Encourage wild ideas.
- Listen to others.
- If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

Idea 1: Use Linear Regression as the primary prediction model.

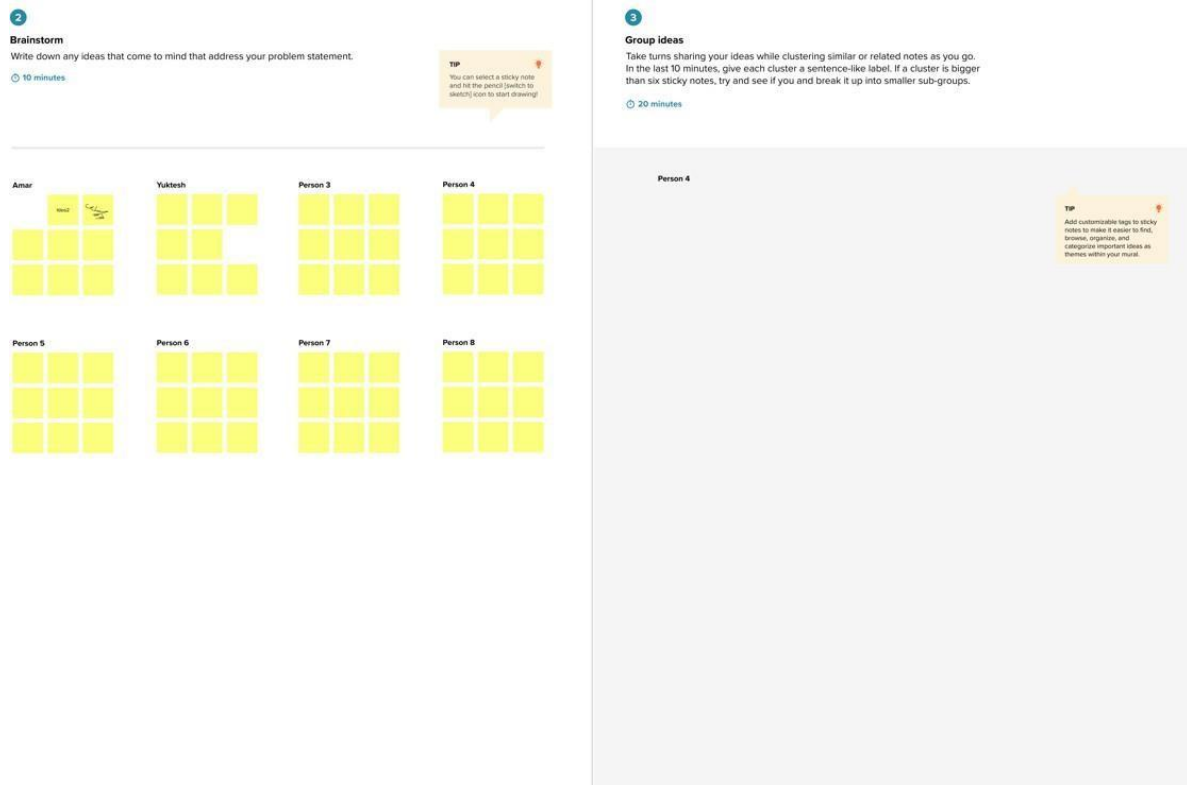

Idea 2: Build a Flask application to expose the model through browser routes.

Idea 3: Support country auto-fill using the cleaned dataset.

Idea 4: Allow single prediction and batch CSV prediction.

Idea 5: Display the HDI score with category labels and charts.

Idea 6: Keep the workflow modular from dataset to demo.

Step-3: Idea Prioritization

The prioritized solution is an HDI Predictor that combines preprocessing, model training, and Flask presentation because it directly solves the problem and provides a usable end-to-end workflow.

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.
