

Problem-Solution Fit

Date	02 July 2026
Team ID	
Project Name	HDI Predictor using Machine Learning and Flask
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

1. CUSTOMER SEGMENT(S) [CS] Researchers, students, policy analysts, and economists who need rapid HDI data analysis.	6. CUSTOMER LIMITATIONS Limited budget for enterprise-grade analytical software, limited programming expertise, and time constraints.	5. AVAILABLE SOLUTIONS Manual spreadsheets (Excel/Google Sheets) or complex statistical software. Pros: Familiarity. Cons: No automated prediction, high time investment, manual formatting required.
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] High frequency of manual, time-consuming data processing and repetitive chart creation; prone to human error, lack of integrated predictive modeling for quick HDI insights.	9. PROBLEM ROOT / CAUSE [RC] Lack of accessible, integrated Machine Learning tools specifically for HDI prediction, leading to fragmented, error-prone workflows.	7. BEHAVIOR Frequent manual data entry into spreadsheets, repetitive manual chart creation, and manual validation of data.
3. TRIGGERS TO ACT [TR] Deadlines for research projects, academic assignments, or	10. YOUR SOLUTION [SL] A user-friendly Flask-based web application that automates HDI predictions	8. CHANNELS OF BEHAVIOR [CH] Online/Web-based platforms.

requirements for quick, automated data insights.	using a Scikit-Learn model, provides batch CSV processing, and generates real-time Chart.js visualizations.	
4. EMOTIONS Before: Frustrated by manual, slow data processing. After: Confident, efficient, and empowered by clear data visualizations.
