

A sprint is a fixed period in which the HDI Predictor team completes a set of project tasks.

An epic is a larger project phase that is broken into smaller stories such as data preparation, modeling, integration, and testing.

A story is a small task that belongs to one of the HDI Predictor epics.

A story point is a number that represents how much effort a story takes to complete.

1- 1 - Very Easy task

2- 2 - Normal task

3- 3 - Moderate task

5- 5 - Difficult task

Story points are estimated using 1, 2, 3, and 5.

Sprint 1

Data Collection (Epic 1)

Gathering data from the HDI dataset (USN1) - 2

Loading dataset into the notebook (USN2) - 1

Data Preparation (Epic 2)

Handling missing values (USN3) - 3

Creating the cleaned dataset fields (USN4) - 3

Handling inconsistency in data (USN5) - 3

Total Story Point in Sprint 1 = $2 + 1 + 3 + 3 + 3 = 12$

Sprint 2

Data Visualization (Epic 3)

Plotting HDI distribution (USN6) - 2

Creating correlation heatmap (USN7) - 2

Creating scatter plots (USN8) - 2

Studying feature relationships (USN9) - 4

Modeling and Evaluation (Epic 4)

Training Linear Regression model (USN10) - 5

Saving and validating HDI.pkl (USN11) - 5

Developing Story (USN11) 5

Total Story Point in Sprint 2 = 2 + 2 + 2 + 4 + 5 + 5 = 20

Total Story Points

Sprint 1 = 12

Sprint 2 = 20

Velocity = Total Story Points Completed / Number of Sprints

Total Story Points = 12 + 20 = 32

No of Sprints = 2

Velocity = 32 / 2

16 (Story Points per Sprint)

Your team's velocity is 16 Story Points per Sprint.
